

**BULLET
BRAKE**
THE ORIGINAL MOTORCYCLE PARKING BRAKE

Bullet Brake Usage Instructions:

Install and Usage Videos Available at:

www.bulletbrake.com/install

1. Using the BULLET BRAKE is simple to do..
2. First apply the front brake lever FIRMLY to hold the bike in position. Important to set the brake firmly as temperature fluctuation (i.e. cooling of brake fluid and components and/or weather temp) varies the applying force of the braking system. Setting the Bullet Brake firmly ensures maintaining a good holding force throughout.
3. While holding the brake, Press the button on the BULLET BRAKE in until it is fully seated. This can feel "firm" and is normal.
4. While still holding the button, release the front brake lever.
5. Finally, release the button on the BULLET BRAKE.
6. The Bullet Brake is now set, and your bike should not roll.
7. Test the holding pressure by trying to move the bike. If the bike can be moved apply the front brake lever to disengage the BULLET BRAKE repeat steps 2-5 again using more pressure on the front brake lever. If for some reason it does not hold, please contact us immediately so we can help.
8. To disengage the BULLET BRAKE simply apply the front brake lever until the BULLET BRAKE button pops out and you're ready to go! If you forget to release the BULLET BRAKE and try to move the bike, the front end will simply drop down reminding you that the BULLET BRAKE is still engaged and can be quickly released.

Thank you for purchasing the  BULLET BRAKE
